

PRODUCT APPLICATIONS

The Phase Head will quickly, accurately, and easily measure the phase sequence of a 400Hz source. At the same time it will also analyze the steady state AC voltage and compare it to MIL-STD-704. After the analysis is complete, the phone application will show a Pass or Fail as to whether you should connect the 400Hz to an aircraft or start troubleshooting and repair of the unit under test. All measured parameters are shown in the app with minimum and maximum limits.

OPERATION

- With power off, plug into 400Hz output cable
- Place phase head and cable on ground
- Turn on 400Hz source and output power to cable
- Start phone app
- Phone app will automatically connect to phase head
- Once connected, start analysis
- Wait a few seconds for analysis to complete
- After analysis the app will change to a results screen
- For simple checks, read the Pass/Fail and continue
- For more in depth info, scroll down in the app to review measurements.
- PATENT PENDING

SPECIFICATIONS

- 2% Accuracy
- Easily connects to a 400Hz output cable
- Android and iOS Phone App
- Unit powered from 400Hz source
- No need for external power
- No high voltage accessible to user to eliminate any shock hazard
- Integrated handle for easy removal
- Works with both Military and Commercial Interlock
